

Faronics Power Save

Works with:  

Reduce PC Energy Consumption and Save Money

PCs continue to be significant energy wasters – especially during periods of inactivity. Since PC energy costs are not separated in utility bills, many organisations are unaware of the high cost of powering their PC networks. As the price of energy continues to rise, organisations are finding their budgets and profits eroding due to higher operating costs.

Every day, over 54 million workers in the US make the decision not to turn off their PCs at the end of the day, **wasting £1.78 billion**

— Alliance to Save Energy, PC Energy Report 2009

A dedicated PC power management solution is an inexpensive and impactful way to reduce your organisation's power bill and can deliver full ROI in as little as six months. Faronics Power Save reduces an organisation's operating costs by eliminating unnecessary PC energy consumption.

For every 1,000 PCs Faronics Power Save is deployed on, organisations can save from £31,000-£38,000 per year. Faronics Power Save keeps PCs running when users need them, powers them down when they are inactive, and can prove its rapid return on investment through energy savings reports.

So why isn't everyone doing this already? The majority of PC energy management initiatives that fail, do so for one reason – they are disruptive and interfere with the way PC users work. Faronics Power Save provides a rich set of features that offer solutions to prevent user invasive actions.

Did You Know?

Cutting PC electricity usage by half will save **£15–48** per PC annually

We've deployed Faronics Power Save enterprise-wide on all our workstations, which is **saving us over £31,925 per year in energy costs.**

That's £31,925 that we now have to buy new IT equipment and software, hire more personnel, or invest into employee training.

— Sung Lee,
Director of Computer Support, Howard Community College

It takes
966 lbs
of coal
to power a computer
for one full year

Implementing Power Save was easy. It provided great energy and carbon reporting, had clear cost-savings, and **most importantly was very visible to our employees** to make them aware of our green strategy.

— Melissa Alvares,
Softchoice

Flexible and Intelligent

Faronics Power Save ensures that energy management occurs in a way that works with the end-users. By taking the human factor of power management into account, Power Save offers users the chance to postpone power management when it may be inconvenient for them. It also takes measures to prevent data loss in the event of a shutdown. Users can schedule wake ups so that their computers are already up and running as soon as they arrive at work.

Maintenance windows involving long patching processes can be held without interruption. Faronics Power Save analyses CPU, disk, network, keyboard, mouse and applications status before taking power management actions. IT can use these requirements and set thresholds to configure power saving plans. These plans are easily edited, deployed and can be reused across the entire deployment. These plans can also be aggressive or lax depending on the time of day or environment. As an example, a typical policy is shown above.

Power Plan Configuration

- 8:00am** – PCs are turned on and a lax power saving policy is applied because users are working throughout the day.
- 6:00pm** – A more aggressive policy is applied because users are heading home now. Also as part of this policy you can ask Faronics Power Save to save any open and unsaved documents for the user before powering down.
- 6:30pm** – Faronics Power Save goes into Patch Mode so maintenance can be done on the machines.

Faronics Power Save Benefits

Intelligent Power Savings

- Intelligent computer energy management that is non-intrusive to end-users
- Generates highly detailed reports showing Power Consumption and Savings
- Accommodates IT maintenance schedules to be non-disruptive

Operational Savings and ROI

- Provides tangible financial savings to organisations through reduced energy consumption
- Provides rapid return-on-investment in just a few months

Easy to Use

- Easy implementation through Audit Mode providing baseline measurement and estimated savings
- Centralised deployment and management through Faronics Core Console

Compatible With

- Multi-Platform: Windows XP and higher; Mac OS X
