- ✓ Granular policy engine based on users and groups
- ✓ Content control
- ✓ Application controls
- ✓ Includes anti virus protection
- ✓ Simple download and installation process
- ✓ Plug and play solution
- ✓ Web based administrative GUI
- ✓ Multiple automated reports
- ✓ Automated updating including URL filters, anti virus, version releases and system back up
- ✓ LDAP and NTML integration

WebTitan is available in two versions, WebTitan ISO and WebTitan for VMware, both of which can be downloaded and installed for free.

Which is for me?

WebTitan ISO and WebTitan for VMware® have identical functionality, operating systems and support costs. Both can be downloaded, installed and configured quickly and simply.

Which you choose to install is entirely dependent on your own requirements.

WebTitan ISO is a complete operating system and software suite image. When installed on a server, it will clear any existing operating system, replacing it with its own and the WebTitan software suite resulting in a dedicated WebTitan web appliance for your gateway

WebTitan for VMware® is a complete operating system and software suite image designed to run as a virtual appliance on VMware or other compatible hypervisors. This will allow you run WebTitan on any server running VMware or compatible hypervisor irrespective of the operating system, allowing you run multiple applications on a single server. Opened as an image it will result in a virtual WebTitan appliance for your gateway.

WebTitan ISO Data Sheet

WebTitan

WebTitan provides feature rich functionality to allow you manage and protect users when browsing the internet. Below are details of the products features as well as technical information to allow you download and install WebTitan.

Anti Virus Protection	WebTitan includes the award winning Clam Antivirus engine. The Clam anti virus engine is auto updating thus ensuring the least management and utmost protection.
URL Filtering	WebTitan offers URL filtering of up to 53 predefined and 8 customizable categories including 10's of millions of URL's which works in conjunction a cloud based look up and real time classification system to provide unmatched combination of coverage, accuracy and flexibility.
Anti Phishing	WebTitan filters block phishing attempts protecting users personal information from theft.
Content filtering	WebTitan can block unwanted keywords and attachments including file types, mime types and renamed files. This can be enabled via the policy engine allowing administrators to block unwanted content in line with the organizations internet policy.
Granular Policy engine	WebTitan contains a highly granular policy engine allowing the administrator to build browsing policy based on users, groups, categories, working times plus much more ensuring enhanced productivity.
Full Reporting Suite	WebTitan contains a comprehensive reporting suite providing automated graphical reports including user and group browsing reports, top URL's , browsing times and many more.
Application Controls	WebTitan allows organizations to block access to unwanted applications, such as IM and Peer to Peer.
Full Proxy Server	WebTitan contains a proxy server including cache for improved resource utilization.
LDAP Integration	WebTitan provides IP based authentication and it can integrate with LDAP or Active Directory using NTLM
Fully Automated updating, backup and reporting	All updates, including anti virus, new version releases, configuration back up, URL category updates and management reports are automated, thus requiring the minimal management overhead possible while ensuring maximum security.
Whitelists and Blacklists	Global whitelists and blacklists and custom categories can be configured for the user or at a group level and to allow/block by full website address or by IP
Full Diagnostics Reporting	WebTitan contains a comprehensive suite of diagnostic tests and reports providing both the administrator and WebTitan support with all the information required to fully investigate any support issues. This includes the ability to send a diagnostic report to WebTitan support and remote SSH authenticated log on from WebTitan support
Web Bases GUI	All WebTitan features are accessed using an intuitive web based interface. This allows controlled access from the network and removes the need for client based management software. Restrictions can also be put in place to limit who and where this interface can be accessed from.

Operating System

WebTitan ISO contains both the WebTitan application and its own operating system, a hardened Linux platform, including scripts for self installation, there are no operating system requirements.
